BrainStorm — English overview

English overview. The full Russian README is ../../README.md.

What it is

A web quiz game: rooms, a leaderboard, a learning mode, campaigns, user-generated questions and optional AI hints (GigaChat). One Flask + Socket.IO process, data in SQLite inside `DATA_DIR`.

Run it

```
cp .env.example .env         # SECRET_KEY is mandatory; AI is optional
make doctor
make install-dev
make test                    # 190 tests, no external services
python run.py                # http://localhost:5000
# or: ./forge.sh start   (linux/macos)   forge.bat start   (windows)
```

What is inside

Layer	Directory	Responsibility
Domain	`app/domain/`	models, registry, game rules — no Flask, no network
HTTP	`app/http_api/`	routes, validation, access
Realtime	`app/realtime/`	rooms, chat, round scheduler
Services	`app/services/`	accounts, achievements, campaigns, leaderboard, UGC
Storage	`app/db.py`, `app/user_db.py`	SQLite, schema, WAL, idempotent migrations
External	`app/ai_client.py`	GigaChat; offline question bank without a key

Borrowing map: modules/module-map.md.
